

## ASVP DIAGNOSTIC EXERCISE NO. 29

(case kindly provided by Santiago Diab, of the San Bernardino CAHFS Diagnostic Laboratory, California)

Roger Kelly

### History:

A blue-eyed white male American Paint foal showed signs of colic almost from birth. Euthanasia performed at one day of age.

1. Describe the abnormalities.
2. What basic disease process/es might be present?
3. Pathological diagnosis (give other possibilities in order of preference)?
4. Suggest possible cause/s.

As with previous exercises, I will circulate a description and discussion of this case in a couple of weeks, via the Members login pages of the ASVP website  
<http://www.asvp.asn.au/>

Please advise me roger-kelly@aapt.net.au if you have any discussion about this case.

*If anyone wishes to provide a diagnostic case, please contact me if you need advice about image requirements.*
